Duct Relative Humidity and Temperature Sensor Modbus RTU

QFM3150/MO

Duct relative humidity (high accuracy) and temperature sensor with Modbus communication

- Modbus RTU (RS-485)
- High measuring accuracy across the entire measuring range
- On-event addressing via push button together with Climatix™ controllers
- DIP switches setting together with other controllers

Use

The duct sensor is used in ventilation and air conditioning plants where high accuracy and short response times for measuring relative humidity are required. The measuring range covers the entire humidity range of 0...100 %.

Examples

- Storage and production facilities in the paper, textile, pharmaceutical, food, chemical and electronics industry, and so on.
- Laboratories
- Hospitals
- Computer and EDP centers
- Indoor swimming pools
- Greenhouses

The sensor is used as a

- control sensor in the supply or exhaust air
- limit sensor for maximum limitation of supply air humidity after a steam humidifier
- limit sensor, for example, for measured value indication or for connection to a building automation and control system

Technical design

Cable entry is made via the screwed cable gland M16 supplied with the sensor, which can be screwed into the housing.

The sensor is fitted with the mounting flange supplied with the sensor. The flange is placed over the immersion rod and then secured to meet the required immersion length.

Service set AQF3153

The service set has three measuring tips without sensor element. Each tip signals a predefined temperature and humidity value to the basic unit:

- 85 % r.h., 40 °C
- 50 % r.h., 23 °C
- 20 % r.h., 5 °C

The fixed values are available at the signal outputs. The values and the test function have the same accuracy. The measuring tips can be exchanged in operation.

Type summary

Product number	SSN NO.	Temperature measuring range	Operating voltage	Output signal
QFM3150/MO	S55720-S468	-40...70 °C	AC 24 V ±20 %/ DC 13.5...35 V	Modbus RTU

Ordering and delivery

When ordering, specify name and product number, for example: Duct sensor QFM3150/MO. Service set AQF3153 (see Accessories) must be ordered separately.

Accessories

Name	Type reference
Filter cap (for replacement)	AQF3101
Measuring tip (exchangeable for replacement)	AQF3150
Service set (for function test)	AQF3153
3 m cable for remote measurement	AQY2010

Engineering

Powering the sensor requires a transformer for safety extra low-voltage (SELV) with separate windings for 100 % duty. When sizing and protecting the transformer, comply with all local safety regulations.

When sizing the transformer, determine the power consumption of the room sensor.

For correct wiring, see the datasheets of the devices with which the sensor is used.

Observe permissible line lengths.

Cable routing and cable selection

Note that when routing cables, the longer the cables run side by side and the smaller the distance between them, the greater the electrical interference. Shielded cables must be used in environments with EMC problems.

Twisted pair cables are required for the secondary supply lines and the signal lines.

Mounting

Location

Mount the sensor in the center of the duct wall. If used together with steam humidifiers, the minimum distance from the humidifier must be 3 m to maximum 10 m.

Mount the sensor in the exhaust air duct if the application involves dew point shifting.

Mount the flange to the duct wall. Then, insert the sensor through the flange and fasten.

- The degree of protection IP65 is not ensured if the seal between the base and cover is removed.
- The sensing elements inside the measuring tip are sensitive to impact. Avoid any impact on mounting.

Mounting instructions

Mounting instructions are enclosed in the package.

Disposal

The device is considered an electronic device for disposal in accordance with the European Guidelines and may not be disposed of as domestic garbage.

- Dispose of the device through channels provided for this purpose.
- Comply with all local and currently applicable laws and regulations.
